- B. By executing the contract or entering upon the site and commencing of work, the contractor represents that he has visited the site, familiarized himself with the conditions and laws, codes and governmental agency regulations under which the work is to be performed, and correlated his observations with the requirements of the contract documents and accepts the site "AS IS."
- C. The contract documents are complementary and what is required by one shall be binding as if required by all. The intention of the documents is to include all labor, materials, equipment and other items necessary for the proper execution and completion of the work. It is not intended that work not covered under any heading, section branch, class or trade of general notes or specifications shall be supplied unless it is required elsewhere in the contract documents or is reasonably inferable therefore as being necessary to produce the intended results. Words which have well known technical or trade meanings are used herein in accordance with such recognized meanings.
- D. The organization of the specifications into divisions, sections and articles, and the arrangement of drawings shall not control the contractor in dividing the work among subcontractors or in establishing the extent of work to be performed by any trade.
- E. WHERE CONFLICT OCCURS ON DRAWINGS THE ENTIRE SET OF MECHANICAL, ELECTRICAL, PLUMBING, STRUCTURAL, AND ARCHITECTURAL PLANS MUST BE CONSIDERED FOR ITS RESOLUTION AND MAY NOT BE CONSIDERED AS AN EXTRA WORK FOR THE CONTRACTOR.

- C. All penetrations into sound rated partitions or floor - ceiling assemblies will be sealed with approved permanent resilient sealant.
- D. All rigid conduit, ducts, plumbing pipes and appliance vents located in sound assemblies will be isolated from the building construction by means of resilient sleeves, mounts or minimum 1/4" thick approved resilient material. (exception: gas piping need not be isolated.)
- E. Metal ventilating and conditioned air ducts located in sound assemblies will be lined. (exception: ducts serving only kitchen cooking facilities and bathrooms need not be lined.)
- F. Mineral fiber insulation will be installed in joist spaces whenever a plumbing pipe or duct penetrates a floor-ceiling assembly or where such unit passes through the plane of the floor-ceiling assembly from within a wall. The insulation shall be installed to a point 12" beyond the pipe or duct.
- G. Combustion air, kitchen and bathroom exhaust ducts within sound-separation assemblies shall be wrapped with type "c" insulation shown in table 10-d of the los angeles county mechanical code.
- H. Electrical requirements.
 - a. An outlet box is defined as a box used for receptacles, switches, surface-mounted lighting fixtures, junction points, telephones, thermostats, television uses, etc. No box dimension shall exceed 6".
 - b. only outlet boxes and a ceiling exhaust fan in the bathroom will be permitted in walls and ceilings of sound rated construction. All other equipment and devices which include recessed fixtures, panel-boards, heaters, kitchen exhaust fan, sound producing equipment, bells, intercoms, etc., shall not be installed in these sound rated walls and ceilings unless prior approval has been obtained from the structural research engineer.
 - c. outlet boxes may be installed in the sound rated walls or ceilings as follows:
 - boxes which penetrate the wall in one area or occupancy shall not be installed on the same stud or in the same space between studs containing a box which penetrates into another area or occupancy, i.e. not in the same bay.
 - there shall be one solid stud between outlet boxes
 - A solid fire blocking will be considered a solid stud in order to place one box above the other in the same bay.
 - d. Outlet boxes shall have a depth not more than 1 1/4 inches, so as to allow the required 2 inch uncompressed insulation to be installed in a standard 2"x4" wall. On walls of deeper dimensions, boxes of greater depths may be permitted.
- I. Conduits or raceways (stubouts) may penetrate the sound rated walls or ceilings, provided the conduit is covered at the penetration point with a permanently resilient sealant.
- J. The requirements for outlet boxes installed for televisions, telephones and thermostats(electric and pneumatic) shall be the same as for receptacles or switches. Plaster rings, open back boxes, or mounting plates shall not be permitted.
 - a. where metallic raceway material (rigid metal conduit, steel tube, and non-metallic conduit) is installed in sound rated floor-ceiling assemblies, it shall be isolated from the floor joist with a resilient material at the points of support. At the point where the raceway passes through holes or notches, care should be taken to insure that the raceway does not touch the surface of the joists. The resilient material used may be rubber, carpet padding, etc.
 - b. when rigid metallic raceway is installed in the floor-ceiling spaces, the space shall have a minimum of 2" of mineral insulation below. Care should be taken during installation of the raceway to allow for this 2" of uncompressed insulation below.
